We are proud of our Irish family heritage and our handcrafted timber windows - the best quality materials combined with the best people in the industry deliver an unrivalled service and guarantee. That's Timeless.

How we will
**HELP
YOU**

The Finer Details of Window Design

Timeless Sash Windows are bespoke timber experts and offer to outline some of those important details that will highlight the design possibilities to give you the most beautiful backbone for your home. It's the small details that count.

Detail No. 1

Warm edge spacer bar in between the panes of double glazing – maximising thermal efficiency and making the double glazing appear to float. You can choose between black or white to align with paint colour choices.

Detail No. 2

Slim glazing bars – the slimmer the glazing bar, the larger the window pane, the more light that will fill your home – our patent pending Slimglaze System allows us to double glaze a bar as narrow as 12mm.

Detail No. 3

Two tone paint – with custom made timber windows we can paint the outside of the window a different colour to the inside, allowing you to maximise your design right to the edges of the glass.

Detail No. 4

During a home refurbishment, it is not always necessary to replace the windows. Original timber window frames can be repaired in situ and the sashes can be fabricated new or repaired, on a case by case basis.

Detail No. 5

Dispelling the myth that timber is higher maintenance than PVC – with a factory finish of specialist exterior joinery paint, timber windows won't need to be repainted for at least 7 years. After this time, a repaint will be necessary from time to time, and these windows will last a lifetime. You should wipe them with a damp cloth annually to remove grime and insect buildup; On the flipside PVC windows will be bulkier and repairs are not possible over time, they will ultimately need a complete replacement.

Detail No. 6

Discuss the glazing options with our window surveyor. Modern glazing combined with window manufacture allows amazing results such as curved windows, electric glass for privacy, many variables in double glazing, bevelled glass for wow factor, stained glass and so much more.

“A big Thank You to the team. The windows are excellent, look great and we have cosy rooms for the first time since 1860! Compliments to the team who visited us who were both professional and charming.”
December 2018

Detail No. 7

Window surrounds – think about how you plan to finish the window internally – with shutter boxes for a traditional look, the details of the architraves and fixed liner options.

Detail No. 8

Living in the Irish climate, warmth and thermal efficiency are of paramount importance when considering the choices of windows. New timber sash windows can achieve U-values as low as 1.4. Even draught proofing original windows can make a difference to rattling and air leakage. Timeless Sash Windows have had their windows tested independently in the UK and have been awarded Class 4 – the best performance available on the market.

Detail No. 9

Don't overlook the ratios of historical design. The Golden Ratio was most commonly used in the Georgian era where windows took centre stage. This ancient formula with its roots in early Greece defines the mathematical method for creating aesthetically pleasing designs and has been analysed in nature, how the leaves of plants are arranged through to artists such as Dali who employed it for his canvases. According to this calculation, the ratio of 1:1.618 is the optimal design for windows.

Detail No. 10

There is a wide array of ironmongery to choose from. You can opt for traditional brass or modern chrome according to the period of your home and your preferences. The latches and handles are all designed for security and according to building regulations so your home will be a secure place and a safe haven. Beware cheap imitation ironmongery that won't last. At Timeless Sash Windows we use top quality ironmongery for all products.

At Timeless Sash Windows we understand the complexities of these details and your decisions, so an initial survey with an expert can start you on the right path. Our project managers are also experts and can assist you as the work unfolds so that your finished home will be just as you dreamed.

Timeless Sash Windows look forward to answering your questions and helping you through the realisation of what you desire for your home.

In the Irish climate you need to choose windows that not only look well, but perform well and are built to last.
